Barr's "Gold Medal" Daffodils

AWARDED

Thirty-one Gold Medals and a Ten Guinea Challenge Cup, Also many First-class Certificates and other high awards.

NEW CLASSIFICATION OF THE DAFFODIL.

For some years a general want was felt by Daffodil exhibitors for a wider elassification of the Daffodil than the then existing one, which had not been found sufficiently elastic to take in several new forms of the Narcissus family raised by hybridists since the great Daffodil Conference of 1884. The Narcissus Committee of the Royal Horticultural Society was approached on the subject, and to meet the ease appointed in 1909 a subcommittee to carefully go into the matter, and see how far the existing classification could be modified or altered so as to facilitate the placing of the many new seedlings now being raised. A good deal of time and careful study was given by the members of the subcommittee to the subject, and the revised classification which they brought forward in 1910 was almost unanimously accepted by the full Narcissus Committee of the Royal Horticultural Society. In the following pages we have adopted to a great extent this classification, which we hope will be of valuable assistance to exhibitors of Daffodils and to amateurs who desire to make a selection of distinct types. As will be seen, 10 distinct divisions have been made together with a section (Div. XI.) at the end to take in a few unclassed species and hybrids. With each division we have given its distinguishing character.

CULTURE AND ADAPTATION OF THE DAFFODIL OUTDOORS.

Soil and its Treatment.—The Daffodil will thrive in any ordinary garden soil, but prefers a deep, rather moist loam. When the soil is of a dry and sandy nature, it should be deeply dug, if possible at least a season before planting the bulbs, well-decayed cow manner being added, and a potato or other vegetable or annual crop grown on the ground. Before the bulbs are planted a sprinkling of quick-lime should be spread on the surface and then dug in. If it is not convenient to first take off a crop of Vegetables or Annuals, then, in digging, mix with the soil crushed bones at the rate of $1\frac{1}{2}$ oz. to the square yard. The ammoniacal properties of stable manure are injurious to the Daffodil; considerable risk is therefore incurred by using it. On good retentive loamy soils stable manure is not required and should not be used, but a dressing of lime once in every three years, with an annual dressing of Basic Slag, at the rate of $7\frac{1}{2}$ oz. to the square yard, may prove beneficial.

FRESHLY DUG SOIL should be allowed to stand vacant two to three weeks hefore planting, to allow the ground to settle down, otherwise the freshly planted bulbs are sometimes drawn under considerably below their proper depth, and the bloom in consequence is apt to be weakened and retarded the first season.

The Best and Safest Manure to use is Crushed Bones or Basic Slag (for price see page 38). This should be applied at planting time, and may be mixed with the soil; the Crushed Bones may be applied at the rate of 4 cwt. to the acre, or 1½ oz. to the square yard, and Basic Slag may be applied in same manner at the rate of 1 ton to the acre, or 7½ oz. to the square yard. We recommend for light soils Crushed Bones (provided they are genuine) in preference to Basic Slag. On very poor and DRY SANDY SOILS we recommend in addition SULPHATE OF POTASII (for price see page 38), to be sprinkled annually in the autumn over the surface of the ground, after planting, at the rate of 2 cwt. to the acre, or about $\frac{3}{4}$ oz. to the square yard. The potash not only increases the depth of colour in the flowers, but also helps to hold moisture in the soil, a condition so essential to the perfect development of the Daffodil. We also recommend the use of Phytobroma in autumn and spring (see particulars, page 38).

IN EARLY SPRING, as soon as the Daffodils begin to show above ground, the surface soil should be well broken with a hoe, to sweeten it after the heavy winter rains; a handy tool for this purpose will be found offered on page 38. Where practicable it is advisable to cover the ground in November with some light covering material (the idea is to prevent the autumn rains from beating down the crust of the ground, and to hreak the severity of a sudden frost). We use for this purpose pulled heather; cut furze or gorse, however, answers the same purpose; cut fern or bracken is bad, as it lies too wet; old pea sticks laid across the ground are good, or on flower beds sprays or small branches of cut evergreens stuck into the ground answer the purpose and look decorative; these of course need renewing when they get shabby. Do not mulch the beds with manure.

Planting and Lifting.—The best time to plant, to obtain the finest flowers, is early Antumn (as early as possible), although bulbs may be put in as late as Christmas with fairly satisfactory results; we have planted some Daffodils as late as the second week in February, and had some very good blooms the third week in May. We recommend, however, early planting for best results. The bulbs may be left undisturbed for years in ordinary good loamy soils, but on poor and light soils they are better lifted every two years, as soon as the foliage has died down, and replanted if possible immediately or as early as is convenient. Never plant when the ground is wet and sticky. Do not put silver sand around the bulbs of Narcissi except in the case of N. corbularia.

DEPTH TO PLANT.—The average depth to plant is from 2 to 3 inches, that is to say, a covering of 2 to 3 inches of soil, but not more. As the bulbs vary considerably in size, according to the relative varieties, the best rule to go by is the bulb itself, which should be covered with soil once and a half its own depth, measuring the bulb from the collar of its neck to its actual base. On light sandy soils the bulbs may be planted a trifle deeper than on heavy stiff soils, and in the North of England and in cold localities they should be put in a little deeper than in the warmer southern districts.

Position and Grouping for Effect.—All Daffodils prefer partial shade, although most of them will grow equally well in the open. The varieties which are best grown in partial shade are indicated in the following pages by an *. In the flower border, to obtain the best effect, Daffodils should be planted in large groups of irregular outline, each group or clump to contain one variety only; avoid straight lines, circles, and symmetrical designs. Masses of Daffodils should always appear in the Hardy Flower border, where irregular and effective sweeps can be planted between the clumps of herbaceous plants which in their turn grow up and hide as well as shelter the Daffodil foliage while it is going to rest. In grouping Daffodils the season of flowering should be horne in mind, as the varieties bloom in succession from the end of February to the end of May, during which period, by a judicious selection, a constant succession of flowers can be maintained. On page 14 we denote the rotation of blooming.

Naturalising Daffodils in Grass, Etc.—All Daffodils may be planted in grass with perfect success. To produce the best effect, the three groups should be kept separate: thus the Star Narcissi should not be mixed with the Great Trumpets, nor Poet's Narcissi with the Star Narcissi. In planting, make the breaks large and bold, scattering the bulbs over the ground broadcast with the hand, and planting them where they fall. Avoid symmetrical lines or formal circles as far as possible, as these are not found in nature. In planting under trees, avoid places where the drip from the branches is greatest, also where the main roots of the trees come close to the surface.

DAFFODILS never look more beautiful or are seen to greater advantage than when growing on grassy slopes or banks, and we strongly recommend our customers to avail themselves of such situations for naturalising Daffodils.

VARIETIES SPECIALLY SUITABLE FOR NATURALISING IN WOODLANDS, GRASSLANDS, GLADES, ETC., DELIGHTING IN PARTIAL SHADE.—The following are mostly free seeders, and will therefore spread naturally; they are mostly wild plants—Abscissus, Countess of Annesley. Excelsior, Golden Spur, Henry Irving, Obvallaris, Spurius, English Lent Lily, Princeps, Scoticus, Albicans, Pallidus Praecox, Moschatus of Haworth

Naturalising Daffodils in Grass, Etc. -continued.

(very pretty in grass), Queen of Spain (in our opinion the most beautiful of all for this purpose), and all varieties of Poëticus, including the old Double White. THE VARIETIES UNDERLINED we do not recommend for the cultivated border, as they deteriorate the second year, while in woodlands, grass, or

meadowland they flourish.

Varieties for Naturalising in Grasslands, Parks, Meadows, on Lawns, etc. — The following fine trumpet varieties are all good strong growers, as well as being distinct and effective—EMPEROR, EMPRESS, P. R. BARR, GOLDEN SPUR, QUEEN OF SPAIN, W. P. MILNER, HORSFIELDII, MADAME PLEMP, MRS. THOMPSON; of the chalice-cupped varieties the following are best suited to the purpose—Incomparabilis Beauty, Frank Miles, Stella superba, Sir Watkin; Leedsii M. M. de Graaff, Duchess of Brabant, Minnie Hume, and Mrs. Langtry; Barrii conspicuus, Flora WILSON, CROWN PRINCE, ELLEN BARR, FALSTAFF, JOHN BAIN, ODORUS and O. RUGULOSUS; of the Poets' Narcissi for planting in grass we recommend Poeticus ornatus, Almira, Grandiflorus, Herrick, and Poetarum and the late Pheasant's Eye (Poeticus recurvus); of the double-flowered daffodils, the Old Double Yellow (Telamonius plenus), Butter and Eggs, Eggs and Bacon, and CODLINS AND CREAM may be used.

For Lawns and Tennis Courts which have to be mown early we recommend the dainty Minimus,

Cyclamineus, Minor, Nanus, and Lobularis. Being very early varieties the grass may be safely mown in May.

Yarieties for Planting by the Water Side.—Daffodils produce a charming effect when growing at the water's edge. The following varieties we can strongly recommend for this purpose—Odorus and Odorus ragulosus, with their rush-like foliage and graceful golden flowers; Duchess of Westminster, John Bain, and the old late Pheasant's Eye Narcissus (Poèticus recurvus), with their graceful starry flowers; Emperor, P. R. Barr, and Empress, three noble trumpeters; Sir Watkin, Barrii conspicuus, Stella superba, Beauty, Frank Miles, and the Double White Poeticus or Gardenia-flowered Narcissus, etc. In choice spots near the water's edge the charming little Cyclamineus should be planted, as also the supplyrecoloured Hopp Petticept Narcissus (N. Bulhacedium cityinum), both of which luxuriste in the sulphur-coloured Hoop Petticoat Narcissus (N. Bulbocodium citrinum), both of which luxuriate in moist grassland.

Method of Planting Daffodils in Grass .- We recommend for this work our Special Bulb PLANTER (see illustration, page 38). By the use of this implement the trouble of planting bulbs in grass is reduced to a minimum. It takes out a clean, circular piece of turf 2 to $2\frac{1}{2}$ inches in diameter, and of sufficient depth. On making the second hole this piece of turf is released from the planter and lies ready on the ground to cover the bulb with. The soil is not in any way tightly pressed and made hard, which is the case when an ordinary dibber is used, and the appearance of the grass is not spoilt; in fact, after planting 10,000 bulbs with this tool on a greensward, one could hardly detect that the grass had been touched. If the ground is very poor and thin, a compost of fresh soil with an abundance of Crushed Bones (7 lbs. to a bushel) should be made and dropped into each hole before placing in the bulb, a little more should be given as a covering, and then the sod of turf be replaced and pressed down. The bulbs will then be

given a fair start in their new quarters. (For price of Barr's Special Bulb Planter, see page 38.)

The Best Time for Planting in Grass is with the advent of the autumn rains, when the ground is in a fairly moist condition. it being impossible to plant whilst the ground is hard and solid from the summer heat; moreover, nothing is gained by planting in hot dry ground, to say nothing of the cost and

labour of planting.

CUTTING DAFFODILS FOR DECORATION.

To obtain very fine blooms Daffodils should be cut in a young state, just when the bud is bursting, placed in water and allowed to expand in a greenhouse or sitting-room. The blooms opened in this way are larger and finer in texture and purcr in colour than those which develop out of doors.

CULTURE OF DAFFODILS IN POTS OR BOXES.

TIME OF POTTING.—Pot as early in autumn as possible to obtain the finest results and earliest blooms. THE BEST COMPOST to pot Daffodils in is a mixture of two-thirds good fibrous loam, and onc-The Best Composition pot Dathouns in is a mixture of two-thirds good indrous loam, and one-third old decayed leaf soil, with a sprinkling of sharp silver sand, adding 1½ lbs. of bone meal or 1 lb. Phytobroma (see page 38) to every bushel of soil, which mix well together before using. In all cases the soil used should be fresh and swect; never pot in soil that is wet or sticky. In order to destroy all injurious insect life it is a good plan to partly sterilise potting soil before adding the Phytobroma or bonemeal. This can be easily done by placing a bushel of soil in a sack, pouring over it a large kettle of boiling water and then spreading out the soil to dry. This will prevent a great deal of after trouble from worms or insects attacking the bulb roots. Another method of freeing soil of insect life is to use worms or insects attacking the bulb roots. Another method of freeing soil of insect life is to use Vaporite (small tin, 9d.; 7 lb. tin, 2s.; 28 lb., 4s. 6d.).

The Pots should be carefully washed out with boiling water or wiped dry before using. Never bot

in dirty or wet pots.

GOOD DRAINAGE should be secured by placing three or more pieces of charcoal (in preference to broken crocks) over the drainage hole, covering the charcoal or crocks with a little rough fibre from the loam. When boxes are used, the slit at bottom of box should be covered with pieces of charcoal, a good layer of rough fibrous loam or leaf soil placed at bottom of box to ensure perfect drainage.

COVERING THE BULBS. - The larger bulbs need not be quite covered with soil, the level of which should be half an inch below the rim of the pot to allow of watering when the bulbs are in growth. Bulbs of the miniature species should be covered with half an inch of soil.

AFTER POTTING, stand the pots or boxes outside in the open, on a firm bottom such as a bed of ashes or a gravel path to prevent the entrance of worms. They should then be surrounded and completely covered with Cocoa Fibre, old decayed leaf soil, or very old ashes (free from sulphur), the top of the pots being 2 inches below the surface of the covering material. This will secure a natural and moist condition to the bulbs and encourage root action. So long as the pots remain buried they will require no watering.

Culture of Daffodils in Pots or Boxes—continued.

THE POTS OR BOXES SHOULD REMAIN PLUNGED for a period of not less than twelve weeks, after which first-early sorts (marked 1 in catalogue), such as GOLDEN SPUR, HENRY IRVING, OBVALLARIS, etc., may be transferred to a greenhouse or sitting-room where the night temperature does not exceed 55° and that of the day 60°. A higher temperature should not be given if well-developed blooms are wished for. If the pots are taken into a sitting-room they should be kept during the day in a sunny window and at all times should be protected from draughts and g1s heat. Later-flowering Daffodils (marked in catalogue 2, 3, and 4) should be brought into warmth later and in succession, thus sorts marked 4 should not be removed from the plunging bed until February or March. No Daffodils will bear hard forcing or bottom heat. After the bulbs are out of the plunging bed, give the plants as much light and air as possible, and once a week a very little weak liquid manure water until they come into bloom.

Of the stronger growing sorts use three to six bulbs, according to size of bulb, for a pot measuring $4\frac{1}{2}$ to 6 inches in diameter; of the small miniature kinds, such as N. Minimus, Nanus, Minor, Cyclamineus, Triaudrus, Juncifolius, and Corbularias, use twelve to eighteen bulbs for a 4½ to 6-inch pot. These small-flowered dwarf-growing species are most charming in pots or little shallow pans. The following may be had in bloom in January: - Minimus, Minor, Nanus, and Cyclamineus, and these may be mingled with Scilla sibirica and Chionodoxas, as both bloom at the same period and produce a charming contrast. For pot-culture the largest bulbs only of *Minimus*, *Cyclamineus*, *Triandrus*, and *Corbularias* should be used, as being collected when in bloom there is an uncertainty in their flowering the first season. The White Hoop Petticoat Narcissus should be potted in almost pure sand kept well moist, and if placed at once in a cold frame after

potting may be had in bloom by Christmas. (See Rock Garden Collections of Miniature Daffodils, page 8.)

If Daffodils are wanted in quantity for cutting early in the season, plant thickly in boxes, giving same culture as recommended above for growing in pots. Of the best varieties to grow for early forcing in boxes, the following command a first place: First early sorts—Queen of Spain, Henry Irving, Golden Spur, Sir Watkin, Old Double Yellow Daffodil; Second early sorts—Emperor, Empress, Horsfieldii,

P. R. Barri, Barrii conspicuus, Incomparabilis Beauty, and Stella superba.

CULTURE OF DAFFODILS IN VASES AND BOWLS In Barr's Special Fibre Mixture.

A charming effect can be obtained by growing Daffodils in fancy vases or bowls, with or without drainage holes, by simply using our specially prepared Fertilised Fibre, Shell and Charcoal Mixture (ready for use, 3s. 6d. per bushel, 1s. per peek); the mixture is light, clean, and nice to handle, and remains sweet; indeed, it is preferable to soil where Daffodils and other bulbs are grown in fancy bowls and vases.

Narcissus Poetaz Elvira growing in Barr's Fertilised Fibre in a bowl without drainage hole.

Culture.-Fill the vase or bowl with the Fibre, Shell and Charcoal Mixture up to within a little below the rim, and plant the bulbs in the same manner as with ordinary potting soil, just covering them; the mixture may be shaken down into place after planting and lightly watered, but should not be pressed down tightly, or the bulbs will be forced upwards when root growth commences.

After planting, either of the following plans may be

adopted :-

(a) The bowls or vases may be plunged outdoors on a bed of eoeoa fibre or ashes, and covered entirely with cocoa fibre, leaving them thus for 8 to 12 weeks, when the bulbs will have made some top growth.

(b) Or the bowls may be plunged in a cold frame, airy cellar, or out-house instead of outdoors; with this treatment, however, it will be necessary to occasionally give water.

(c) A third plan is to place the bowls after potting in a dark or moderately dark airy place, cool but not too cold; they must not be placed in a close eupboard or the bulbs will certainly suffer.

In the case of bowls plunged outdoors there will be no need to give any attention in the way of watering, etc., as they will, of course, have abundance of moisture from the autumn rains. Where, however, the bulbs are not exposed to the rain, the bowls should be examined once or twice a week, eare being taken that the fibre mixture is kept uniformly damp; but for the first week or two after planting water should be given very sparingly, sufficient only to keep the fibre damp enough to encourage root action. As soon as the bulbs are

well rooted, water should be given more freely, the fibre mixture being then kept quite moist; if the mixture is allowed at any time to become dry, even for a day, the buds will go blind; should by any chance too much water have been given, the bowls may be drained by carefully tipping them on their side. If obtainable rain water is the best to use.

When the bulbs have made some top growth the bowls should be removed to the sunny window of a sitting room, where they will get the morning sun, or be kept in a cool greenhouse close to the glass, it being necessary that they should be given sufficient light and air to prevent the foliage from becoming drawn. Draughts and gas heat must be earefully avoided.

No bottom heat should be given, and a temperature of 55° to 60° by day and 50° to 55° by night is

sufficient to obtain good blooms; the bulbs resent too warm a temperature.

For Bowls and Barr's Fertilised Fibre Mixture, see page 38.

COLLECTIONS OF DAFFODILS

- Splendid Mixed Daffodils of Many Sorts, for naturalisation, including Trumpet, Chalice-cup, and Poet's Narcissi, a special mixture of Daffodils of all kinds suitable for large plantings in Grass, Woodlands, etc.per 1000, 25/-; per 100, 2/9

Unnamed Choice Seedling Daffodils.

The following are beautiful flowered Seedlings from crosses between Weardale Perfection, Madame de Graaff, King Altred and fine varieties of Poeticus. They have not been selected out and named as they resemble too closely other named Seedlings which are in commerce. Many fine varieties suitable for exhibition may be selected out.

Seedlings of Weardale Perfection x Madame de Graaff, containing many fine new White Trumpet and Bicolor Trumpet Dassodils, per 100, £5 5s.; per doz. 15/-

Seedlings of King Alfred, containing large and handsome Yellow Trumpet Daffedils of good form, tall growers, per 100, £5 5s.; per doz. 15/-

Seedlings of Large-flowered Poeticus, containing many fine new varieties.

per 100, 30/-; per doz. 4/3

Miniature Daffodils for the "Rock Garden."

The following are charming little subjects for rockwork, where their dainty flowers are seen to perfection. They should be left undisturbed for years, and, if happy, will soon establish themselves and afford a lovely picture in early spring. All the Corbularias (except Corbularia monophylla) and Cyclamineus like moisture, and should therefore be planted at the foot of the rockery. Corbularia monophylla flourishes in a warm dry sheltered situation, planted in almost pure sand; when coming into bloom give water freely. Triandrus albus (Angel's Tears) and Juncifolius delight in partial shade and a light gritty soil, and should be given a welt-drained position. In the case of these Miniature Daffodils, the ground may be carpeted with close-growing surface-rooting plants, such as Arenaria caspitosa, Thymus serpyllum vars., T. langinosus, Herniaria glabra, Mossy Saxifragas, etc.; these plants provide a natural protection for these little bulbs, besides keeping their dainty blooms from being splashed and soiled in rainy weather. We prefer, however, seeing these little gems peeping out of grass, and can supply seed of suitable fine dwarf grasses for sowing in September after planting the bulbs; this sowing will give a fine green carpet by the following spring when the Narcissi bloom.

Full descriptions of the following Miniature Daffodils will be found in body of Catalogue.

For Daffodil Seed for Autumn Sowing, see page 37.

Barr's New Seedling Daffodils for 1912.

The following list of Daffodils comprises some of the finest novelties, and includes new seedlings of our own raising and many of the best raised by the Rev. G. H. Engleheart, the Rev. G. P. Haydon, Mr. E. M. Crosfield, Mr. J. C. Williams, Mr. P. D. Williams, Mrs. Backhouse, Mr. Henry Backhouse, Mr. Cave, Mr. Philip Worsley, and Mr. Dawson. We would specially draw attention to the following grand exhibition kinds: Ariel, Bedouin, Cæsar, Charm, Cossack, Dione, Dresden, Empire, Eros, Florizel, Furnace, Jasper, Lewis Carrol, Lord Kitchener, Loveliness, Marie Louise, Memory, Mermaid, Messina, Michael, Michael Angelo, Mrs. George H. Barr, Pandora, Peter Barr, Red Beacon, Rhoda, Ruby, Seraphine, Sigismund, Silvia, Sirdar, Sir Galahad, Snow King, Socrates, St. George, Timon, Volcano, and Zephyrus -all of great beauty. We would mention that we purchased in 1910 from Mr. Charles Dawson (who has given up growing Daffodils) his "Rosemorran" Daffodil Seedlings, containing many beautiful varieties, and at the same time took over his Daffodil garden for the rearing of our new seedling varieties. Visitors at the London and Birmingham Shows will well remember the high quality of Mr. Dawson's "Rosemorran" flowers. We have also now removed from our Surbiton Nurseries to Taplow, where in future a fine display of our Daffodils and Tulips may be seen in Spring.

Where we have a record, we give in inches the heights as registered at our Nurseries.

The relative qualities as we judge them are indicated by xx, xxx, xxxx, the highest quality flower being given the most marks. The figures after the names indicate the relative period of flowering, (1) being earliest, (5) being latest.

		each	
Adrastus (Incomparabilis), xxx, new 1912, a handsome flower with white perianth and bold globular bright yellow cup, having a green centre and golden central halo, very late bloomer, ht. 21 in.		eacn s. 7	d
Aglaia (Leedsii), xxx, new 1912, an elegant flower, perianth white, cup pale primrose with sulphur centre, margin fluted, very late bloomer, ht. 19 in.	0	7	
Ailsa (Trumpet Daffodil), xxxx, raised by Mr. E. M. Crossfield, a beautiful chaste flower, perianth pure white, trumpet white, large and bold with recurved margin. AWARD OF MERIT R.H.S., 1907	5	5	0
Alabaster (Triandrus Hybrid), xxxx, new 1912, a very beautiful hybrid of Minnie Hume x Calathinus, flowers snowy white with large elegant cup and broad perianth, tall		15	
Arctic Light (Leedsii), xxxx, new 1911, a lovely flower of a cool shade, having a snowy white perianth and large flattish lemon crown with green centre, ht. 14 in	5	5	0
Ariel (Triandrus Hybrid) (3), xxxx, new 1912, a beautiful refined snowy white flower resembling Dione but a shade smaller, of very elegant form, ht. 17 in	2	2	0
Bernardino (Incomparabilis) (3), xxxx, a grand flower, with very large creamy perianth and a very large palc cup, prettily fluted and heavily stained dccp orange-apricot	3	3	0
Bloodstone (Barrii), xxxx, new 1911, raised by Mr. C. H. Cave, a very lovely flower, with ample round snowy white perianth, and a deeply flanged cup of fiery orange with greenish centre.	5	5	0
Cæsar (Poeticus) (5), xxxx, new 1911, a remarkably fine flower of perfect form, measuring slightly over 3 inches across, with very broad rounded solid white perianth, the petals all of equal size and well imbricated; large lemon-yellow eye edged dark madder-red; flowers erect and borne on long stout stems, ht. 16 in.	5	5	•
Cardinal Wolsey (Barrii), xxxx, new 1910, a very lovely flower with broad snowy white perianth, slightly reflexing and a very flat large fluted crown of a brilliant orange-apricot	2	2	
Challenger (Barrii), xxxx, new 1910, a magnificent flower measuring more than 3 in. across, of fine form, solid Poeticus-white perianth and much expanded crown measuring about 1 in. across, soft canary with a striking broad margin of brilliant fiery red	32	10	o
Chameleon (Trumpet Daffodil), new 1911, a beautiful and unique little Daffodil of "Apricot" breed, perianth delicate pale primrose shading down to blush-white, ercct, slightly twisted and pointed, trumpet pale shell-pink shading to sulphur; quite a new break			
of colour, which may be valuable to the hybridist, ht. 14 in.	6 B*	6	0

Barr's New Seedling Daffodils—continued.		ach.	
Chryseis (Giant Incomparabilis) (4), xxx, new 1911, raised by Mr. T. Batson, fine erect flower of great substance, and measuring nearly 4\frac{1}{3} inches across, perianth cream coloured, broad, smooth, pointed and well imbricated, erown full dark yellow, short with open mouth, recurved and prettily frilled, ht. 22 in	£	s, 10	d
Citriona (Incomparabilis) (2), xxx, new 1912, a beautifully formed flower, soft citron-yellow, almost a self, with greenish shading in centre of erown, ht. 17 in	0	10	6
Creesus (Giant Incomparabilis), xxxx, a very fine flower of great substance with large rounded and imbricated primrose perianth and a wide expanded crown of deep red. AWARD OF MERIT BIRMINGHAM, 1911	25	0	0
Dione (Triandrus Hybrid) (3), xxxx, new 1912, a very lovely and refused flower measuring 3½ inches across, snowy white throughout, crown expanded, of beautiful symmetry, prettily fluted, ht. 17 in.	3	3	0
Dosoris (Incomparabilis), xxxx, a lovely flower, with broad white perianth and a very large flattened crown of a fiery salmon-scarlet throughout, very fine	5	5	0
Dresden (Poeticus), xxxx, new 1910, a refined and beautiful Poeticus of good bearing, with well-imbricated snowy white perianth, and a very flat eye of fiery scarlet, most attractive, ht. 17 in. See coloured plate in "The Garden," September 24th, 1910	I	I	0
Empire (Giant Leedsii) (3), xxxx, new 1911, raised by Mr. E. M. Crosfield, one of the finest of this class, and a very noble and beautiful flower of highest type; perianth white, very large, broad, and imbricated, crown very large, lemon shading to white, slightly expanded at mouth, and exquisitely frilled, foliage broad and blue-grey, ht. 16 in. AWARDED FIRST-CLASS CERTIFICATE BIRMINGHAM.	16	16	0
Eros (Barrii), xxxx, new 1909, flower large and of fine quality, measuring 3½ inches across with very broad imbricated creamy white perianth, and large flat crown fiery scarlet shading to golden-orange, prettily fluted, ht. 15 in. See coloured plate in "The Garden," Sept. 24th, 1910			0
Euphrosyne (Trumpet Daffodil), xxxx, new 1910, raised by the Rev. G. P. Haydon, a very elegant flower, with creamy perianth and long straight trumpet of a soft citron yellow, ht. 15 in.	2	2	0
Faction (Giant Incomparabilis), xxxx, raised by Mr. E. M. Crosfield, a handsome flower of fine erect bearing, with broad white perianth and large bold wide crown of a lovely citron-yellow, ht. 18 in.		12	0
Fair Lass (Leedsii), xxx, new 1912, flower of elegant form with broad shapely snowy white perianth and a globular fluted eitron cup	0	10	6
Fleetwing (Giant Incomparabilis), xxxx, large flower of beautiful form and fine substance, perianth pure white, crown primrose-yellow	I	10	0
Florizel (Barrii) (3) xxxx, new 1912, large flower of beautiful rounded form, with broad imbricated white perianth and wide rich golden crown deeply fringed and bordered fiery orange. AWARD OF MERIT TRURO, 1912	5	5	0
Gadfly (Incomparabilis) (3), xxxx, new 1910, a remarkably striking flower with white perianth slightly reflexing and shaded a delicate sulphur at base, and a large flat eye measuring 1 inch across of a deep fiery scarlet, shading to golden-buff at centre, ht. 14 in	6	10	0
Golden Ensign (Jonquil Hybrid), xxxx, new 1912, the most heautiful trumpet Jonquil hybrid yet raised; flowers erect, 3 inches across, of beautiful symmetry, rich golden, with broad well-imbricated perianth and an elegant trumpet 18 inches long, having a pleasing		10	0
Jonquil fragrance, ht. 16 in.; a reliable grower	•		0
Great Warley (Giant Incomparabilis), xxxx, a remarkably striking flower after the style of Narcissus Lady Margaret Boscawen, but very much larger, perianth white, broad and massive, crown clear yellow, measuring 1½ inches across. First-Class Certificate			
R.H.S. and BIRMINGHAM Helios (Giant Incomparabilis) (1), xxxx, new 1912, a large handsome flower of fine form measuring 4 inches across, with broad imbricated soft yellow perianth and a large trumpet-shaped crown with open frilled mouth, very deep golden with a faint coppery tinge, ht. 18 in		10	
Herod (Trumpet Daffodil) (3), xxxx, raised by Mr. E. M. Crossield, a very fine flower of good bearing, perianth creamy white, very broad, and lying smooth and flat, trumpet elear yellow, large and clegant, with broad open frilled mouth, ht. 18 in.		15	
Horatius (Giant Incomparabilis) (3), xxxx, raised by Mr. E. M. Crosfield, a great improvement on N. Lady Margaret Boscawen, perianth white, flat and imbricated, crown clear yellow, large and bold, broadly fluted at brim; of fine bearing, ht. 18 in	3		ò
lcepeak (Leedsii) (4), xxxx, new 1911, a very dainty and beautiful flower of perfect symmetry having a broad, smooth, snowy white perianth, and a small cream globular cup with green centre; a tall grower	0	10	6
Inga (Barrii), xxxx, a greatly improved Incognita, with broad imbricated pure white perianth, of fine substance, and a large deep orange-apricot crown	: · 4	4	0

			Ĭ

NARCISSUS MERMAID.

A great improvement on White Queen, flower larger and more beautiful and plant much taller, with handsome bluish foliage; perianth white, large and well imbricated, crown very large and bold, elegantly flanged at mouth, opening pale creamy primrose and passing off almost white, ht. 20 in.; a lovely exhibition flower. See page 11.

Barr's General List of Daffodils

For Alphabetical Index, see page 2 of Cover.

The following list of Daffodils embraces the highest class and most distinct varieties, surpassing in beauty and diversity all other assortments offered to the public. It represents the cream of our Collection (over 500 kinds), and the best of the newest varieties in commerce up to 1912, several being offered to the public for the first time.

During the past few years we have rejected many of the older kinds which we considered had been superseded by better sorts at equally moderate prices. We can, however, generally supply such if required, as, although we do not catalogue them, we keep a small stock of them

at our Nurseries.

Time of Flowering.—The relative period of flowering of the different varieties and species out of doors we have denoted by means of numbers after the names, thus:

(1) 1st early, flowering from February to carly March.

(2) 2nd early, flowering in March.

(3) Varieties flowering in mid-season, or early in April.

(4) Late-flowering varieties, from middle to end of April.

(5) Yery late-flowering varieties, opening in May.

The actual period of blooming depends upon the scason and district; thus in early districts (1) would commence in January and early February, while in colder districts end of February or beginning of March; but the natural rotation would remain the same.

Height.—In most cases we give also the heights in inches as recorded at our Nurseries.

Quality of Flower.—Each season we go carefully over our Daffodil collection with a view to recording the quality of each variety. This we indicate by x, xx, xxx, and xxxx, giving the most marks to those we judge to be the finest. We trust this record may be found useful to amateurs in making their selections.

Cultural Marks.—* The varieties marked thus * thrive best under the shade of deciduous trees, naturalised in grass in shady nooks, or on grassy slopes facing north.

† indicates those kinds which should be selected where Daffodils are grown in pots or for exhibition; they are, however, also splendid border varieties.

§ indicates those Daffodils which, besides being fine border plants, make a pretty effect when naturalised in grass; they are all strong growers and free bloomers.

Any Daffodil not offered in this Catalogue we can generally supply, if required.

DIVISION I .- TRUMPET DAFFODILS.

DISTINGUISHING CHARACTER.—TRUMPET OR CROWN AS LONG AS OR LONGER THAN THE PERIANTH SEGMENTS.

(A) YELLOW AND SULPHUR-COLOURED TRUMPET DAFFODILS.

Varieties with Yellow, Lemon or Sulphur-coloured Trumpet and Perianth of same shade or lighter (but not white).

*Abscissus (4), x, a native of the French per doz. each.

§†Mikado (2), xx. raised at our Nurseries, flower of M. J. Berkeley form, but much finer; colour golden-yellow, with graceful twisted perianth, and very large trumpet with wide open mouth, deeply flanged at brim; very showy and free flowering, ltt. 15 in.	1		
per 100, 35/	- 5	00	6

YELLOW TRUMPET DAFFODILS—continued.		doz. ea	
Minimus, true (1), the smallest and dwarfest Trumpet Daffodil, flowers rich full yellow; height about 3 inches, flowering outdoors in February; a dainty little gem for edgings, nooks on rock-work, or to naturalise in grass, and for pot culture. It likes a peaty soil. In 1887, during a tour in Spain, the late Mr. Peter Barr found this charming miniature Daffodil growing freely amongst gorse, with a south aspect. For our annual supply we have to depend upon collected bulbs which are taken up while the foliage is green: in consequence there is a possibility that all the bulbs may not bloom the first season, but a proportion will		60	
*Minor, true (1), a most graceful and charming miniature Daffodil of Maximus form, flowers with full yellow perianth gracefully twisted, and the miniature trumpet elegantly flanged at mouth, valuable for edgings and rockwork, very early, ht. 7 in.; a very scarce variety			
M. J. Berkeley, omitted, being so shy a bloomer.			
†Monarch (2), xxxx. raised at our Nurseries, a noble flower, and one of the most refined of all the Giant Golden Trumpeters; perianth and trumpet rich full yellow and very large, of perfect form and fine substance, growth strong and sturdy, ht. 20 in. (Coloured Illustration may be had free on application)		02	3
§†Mrs. Harry J. Veitch, perianth light yellow, broad and imbricated, trumpet golden- yellow, handsome bold flower, good forcer		OI	
*Nanus, true (1), rich full yellow, very dwarf and early, a gem for edgings and naturalising on grassy banks, etc., ht. 6 in.; now very scarce. Lobularis is generally sold for it, but is quite a distinct variety and will be found offered on page 19			
†*Obvallaris (Tenby Daffodil) (1). xx, this very distinct variety has all the fine qualities that delight a connoisseur, perianth and trumpet full yellow, very early; it is best grown in partial shade, and is a fine variety for naturalising in grass; it also forces well; ht 12 in		IO	
,, ,, ,, Extra large bulbs ,, 8/6	I	30	2
\$†Olympia, a good showy variety with bright yellow perianth and a rich deep yellow trumpet	-	60	8
§†Othello (4), xx, primrose perianth, broad and campanulate, trumpet rich yellow, of good substance; dwarf sturdy grower, ht. 10 in.	5	60	6

§Van Dyck (1), xx, a bold handsome flower, rich golden-yellow, trumpet with broad open mouth	2	30	3
†Van Waveren's Giant (3), xxx, a giant Trumpet Daffodil, flowers of immense size, perianth primrose and of rather campanulate form, trumpet bright yellow with very large open mouth, flanged at brim, ht. 18 in.	_	- 12	6

(B) WHITE TRUMPET DAFFODILS.

Varieties with White Perianth and White or nearly White Trumpet.

Most of the Daffodils in this section thrive best in fibrous virgin loam, mixed with leaf-soil; generally speaking they dislike manure; where, however, the soil is very poor, basic slag may be used (for full directions, see page 2). The varieties marked thus * thriv shade of deciduous trees, naturalised in shady grassy nooks, or on grassy slopes facing north.	bone	e-meal	or
†Ailsa. See New Seedling Daffodils, page 9	per	doz. ea	ch.

DIVISION II.—INCOMPARABILIS.

Example of a Flower in Division II. INCOMPARABILIS GLORIA MUNDI (reduced in size about half).

Large Chalice-Cupped Daffodils or Star Narcissi.

DISTINGUISHING CHARACTER .- CUP OR CROWN MEASURING FROM ONE THIRD TO NEARLY EQUAL THE LENGTH OF THE PERIANTH SEGMENTS. (FOR VARIETIES HAVING THE CROWN EQUAL THE LENGTH OF PERIANTH SEGMENTS SEE DIVISION I.)

The varieties of Narcissus Bernardi and Nelsoni, also the larger-flowered varieties of Engleheartii, are now placed under this division.

The beautiful Star Narcissi commence flowering in March, and furnish a succession of bloom throughout April, All are of elegant beauty, and as cut llowers are extensively used for furnishing vases and table bouquets. For this purpose they should be grown in quantity in boxes and forced for early bloom (see page 3). They make charming pot plants, while in beds and borders they are very showy and naturalised in grass they produce a graceful effect. per doz. each

†Adrastus. See New Seedling Daffodils, page 9 &t Artemis (2), xx, broad whitish perianth and hand-

	some expanded yellow cup, ht. 18 in
	§Autocrat (3), xx, broad full yellow perianth, cup yellow, much expanded, ht. 20 in.

§†Yellow Prince, xxx, new 1910, a nice rounded flower, with broad well-imbricated perianth of a light primrose-yellow and a bold globular rich yellow cup elegantly crimped at margin, ht. 16 in.	7		.5	6

Example of a Flower in Division III.

BARRII SIDDINGTON
(about two-thirds natural size).

DIVISION III.—BARRII.

Short-Cupped Daffodils, or Star Narcissi. (Including varieties hitherto classed as Burbidgel.)

DISTINGUISHING CHARACTER.—CUP OR CROWN MEASURING LESS
THAN ONE-THIRD THE LENGTH OF THE PERIANTH SEGMENTS (NOT INCLUDING POETICUS, WHICH FORMS A CLASS BY ITSELF).

For a long time trouble was being experienced in the placing of certain new seedlings under the **Barrii** and **Burbidgei** sections, as the two divisions ran so much into one another. The revising committee therefore decided to make only one section of them, retaining the name **Barrii**.

The chaste beauty of these shorter-cupped Narcissi is the more highly appreciated when the cut flowers are seen arranged in vases. The brilliancy of colouring in the cups of some, and the dainty elegance of others, render them all more or less valuable exhibition flowers. The cheaper kinds we can strongly recommend for beds and borders, and for naturalising in grass, woodlands, wild gardens, etc.

Per doz. each.

§Agnes Barr (4), xx, perianth creamy white, cup soft yellow, a very delicately coloured refined flower, ht. 16 in.per 100, 4/6 0 8... —

DIV. V.—TRIANDRUS AND TRIANDRUS HYBRIDS.

Triandrus and all hybrids obviously containing Triandrus blood, such as Queen of Spain (a wild Triandrus Hybrid), Agnes Harvey, Bennett-Poë, Earl Grey, etc.

The introduction of Triandrus blood in hybridising has resulted in such a very distinct group of hybrids that the Classification Committee of the R.H.S. deemed it advisable to make one section of them. For grace and beauty they are unsurpassed. We recommend them being given a situation partly shaded by trees, and if a little very fine dwarf grass seed is sown amongst them, the beauty of their flowers is enhanced. Once planted they may remain undisturbed for years.

NARCISSUS TRIANDRUS.

The Cyclamen-flowered Daffodils with reflexing perianth.

THE DAINTY LITTLE "ANGEL'S TEARS" DAFFOOLL (Triandrus albus) was found by the late Mr. Peter Barr on the mountains of Portugal and Spain, growing in very hard, firm, fine gritty soil, sometimes in the narrowest fissures of granite and slatestone rocks. All in this section make lovely little pot plants, and grown thus should be given cold frame culture. Established on rockwork they form a picture full of grace and beauty. They prefer shade, a gritty soil, and a well-drained position.

drained position.			
† Triandrus albus (3), an exquisitely beautiful little flower, appropriately called the "Angel's Tears" Daffodil, having a creamy white little globular cup and perianth of same colour very much reflexing, ht. 7 in. As we have to depend upon collected bulbs	er de s. d	oz. ead	ch. d
for our annual supply, and these have to be taken up while the foliage is still green, a proportion may possibly not bloom the first season. The bulbs should therefore be left			
undisturbed to establish themselvesper 1000, 60/-; per 100, 6/6			
,, Larger-size bulbs ,, 9/6 ,, A few extra strong homegrown bulbs, suitable for pot culture ,, 15/- :			
† Triandrus calathinus (3). One of the most beautiful little Daffodils in existence. The flowers, which are snowy white, are more than twice the size of <i>Triandrus albus</i> , with long goblet-shaped crown prettily fluted, and are borne two to three on a stem; the foliage has a curious twisted habit, ht. 7 in. For pot culture and rockwork it is a perfect gem. The late Mr. Peter Barr collected this rare Daffodil some years ago on one of the Glénan Isles, the collecting being attended with a good deal of risk. Unfortunately it is no longer to be found there, the sea			
having washed away all trace of it, but we are able to successfully raise it from seed 20			
**Triandrus concolor (true) (3), uniform full soft yellow, slightly scented, a rare and beautiful little Daffodil, ht. 7 in. A small quantity of this rare bulb was	5 C	03	3
*** specially collected for us last spring; only a few could be found	o (51	0

NARCISSUS TRIANDRUS HYBRIDS.

per doz. each s. d. s. d. §†Queen of Spain (4). xxx, found by the late Mr. Peter Barr in Spain. One of the most beautiful, distinct, and graceful Daffodils in cultivation, and unsurpassed either for bedding, pot or vase culture, or for naturalising in woodlands, etc. The flowers vary slightly in size, but all are of a uniform soft, delicate, clear yellow, with a gracefully reflexing perianth, trumpet of distinct and elegant form, ht. 12 in. Naturalised in grass under trees, this Daffodil forms a delightful feature in the garden. It also adapts itself readily to bowl culture in Fertilised Fibre Shell and Charcoal mixture, or damp pebbles and gravel, and grown thus affords an artistic decoration for the sitting-room. Awarded FLORAL CERTIFICATE at the Daffodil Conference, 1896. As we have to depend upon collected bulbs for our annual supply, and these have to be taken up while the foliage is still green, there is a possibility that all the bulbs may not bloom the first season, but a fair proportion will1st size bulbs, per 100, 17/6 2 6...0 3 Smaller bulbs for large plantings, to naturalise, per 100, 12/6 1 9...0 2 NARCISSUS QUEEN OF SPAIN A few extra large bulbs (About two-thirds natural size). 21/- 3 0...0 †Agnes Harvey (4), xxx, a beautiful hybrid, perianth snow-white, cup of exquisite †Alabaster. (There are many other beautiful hybrids belonging to this section, but they are not yet in commerce.)

DIVISION VI.—CYCLAMINEUS & CYCLAMINEUS HYBRIDS.

Seeing that **Gyclamineus** blood, like that of **Triandrus**, imparts such a distinct form to Daffodils, a separate division has been made for its hybrids. It has been used by many hybridisers as a parent, but as a rule the progeny has not been long-lived. It is possible, however, that we may yet obtain hybrids with a stronger constitution to come under this division.

TAZETTA – Dutch varieties of Polyanthus Narcissi,			

DIVISION IX.—POETICUS—True Poet's Narcissi.

These "Poet's" Daffodils or Narcissi all have snowy white perianth segments or petals, and a small flattened eye or crown, yellow or lemon edged more or less deeply with scarlet or crimson, and sometimes almost all scarlet. All are more or less sweetly scented.

see our General Bulb Catalogue.

The earlier flowering varieties afford a very beautiful decoration indoors when grown in pots (5 bulbs in a pot) or forced. As border plants and naturalised in grass by themselves the Poet's Nareissi produce a lovely effect.

Early planting and liberal culture is specially recommended for these Poet's Daffodils.

To obtain tall stems and fine large flowers they should be grown in a rich deep soil not too dry. The varieties having very highly coloured crowns should be cut young to preserve the fine colouring.

Cyclamineus, and Juncifoliuseach variety 1s. per packet

Four Interesting Books on the Daffodil.

John Parkinson's "Paradisi in Sole Paradisus Terrestris, or A Garden of all sorts of pleasant flowers which our English agree will permit to be noursed up: with A Kitchen garden of all manner of herbes, rootes, & fruites, for meate or sause used with us, and An Orchard of all sorte of fruitbearing Trees and Shrubbes fit for our Land together With the right orderinge, planting & preserving of them and their uses & vertucs, Collected by John Parkinson, Apothecary of London, 1629." Faithfully reprinted from the Edition of 1629; a delightfully written, interesting old book. £3 3s.

The Book of the Daffodil (by Rev. S. E. Bourne), containing valuable information on the cultivation of the Daffodil gained by the results of the author's own personal experience, 2/6; post free, 2/9.

Daffodils (by Rev. Joseph Jacob), a well-got-up useful book on the Daffodil, with 8 coloured plates, 1/6; post free, 1/9.

Narcissus, its History and Culture (by F. W. Burbidge), an interesting work giving the History of the Daffodil to date of publication—1875, with 48 coloured plates, £1 10s.

BARR'S SPECIAL METAL LABELS FOR DAFFODILS, Etc. (With Raised Letters.)

No. 1, with solid metal shank, about 9 inches long. We specially recommend this for beds and borders. 4d. each.

No. 2, with stout wire stem, 6 or 9 inches long: specially suitable for pots, etc. (in ordering please state whether a short or long shank is required). 3d. each.

Ditto, with 12-inch stem, 4d. each.

No. 3, for Suspending, 3d. each.

The above prices include the stamping of any name required.

These special metal labels are not kept in stock, being made only to order. The time taken to execute an order is generally from 2 to 3 weeks.

Manures, Soils, Fibre, Vases & Bowls for Daffodils.

Barr's Phytobroma, the best Manure for Daffodils, Hyacinths, Tulips, etc., and for Flower Borders generally. It should be mixed with the soil below the bulbs at planting time at the rate of 2 to 3 ozs. to the square yard, and in spring, when the bulbs are showing above ground, a top-dressing may be given of 3 oz. to the square yard. For Pots, mix *Phytobroma* with the soil, to be used at the rate of 1 lb. to the bushel, and in Spring, when growth is showing, top-dress once a fortnight, using a small teaspoonful and well mixing with surface soil. 2-lb. tin, 1/-; 7 lb. 2/6; 14 lb. 4/6; 28 lb. 7/6; 56 lb. 12/6; 1 cwt. 21/-.

Basic Slag, per cwt. 6/6; per 14 lb. 1/-.

Bone Meal (Genuine Fine Crushed Bones), best quality, per cwt. 12/6; per 7 lbs. 1/-,

Sulphate of Potash, per cwt. 21/-; per 7 lbs. 1/9.

Barr's Specially Mixed Potting Soil, containing a suitable quantity of Phytobroma, 2/6 per bushel (bags free).

Barr's Fertilised Fibre, Shell, and Charcoal Mixture, ready mixed for use, a specially prepared mixture suitable for growing bulbs in vases, bowls, jardinets, etc. (see page 4). 3/6 per bushel; 1/- per peck (bags free).

Small Pebbles and Charcoal, 6d. per quart; 3/6 per peck.

Charcoal (fine-twig), per peck 1/-; per bushel 3/6.

Cocoa Fibre for plunging pots and covering beds in winter, per bushel, 1/3; 3 bushels for 3/6 (bags

free and full measure guaranteed).

Bulb Bowls.-We have had special little vases made for us by Messrs. Doulton for growing Daffodils and other spring bulbs in our Fertilised Fibre and Charcoal Mixture. They are of elegant shape, of neutral art green and drab shades, and without drainage holes, thus saving the use of saucers; useful for growing not only Daffodils in, but also Tulips, Hyacinths, Crocuses, early Scillas, Snowdrops, Chionodoxas, and Lily of the Valley, also the charming winter-flowering Irises—reticulata, etc., either for table decoration or the greenhouse. During summer these bowls are very useful for holding cut flowers, etc. All Daffodils which may be grown in pots may also be grown in these fancy bowls, and in the foregoing pages we have indicated thus † those kinds most suitable for the purpose.

Barr's "Doulton-Ware" Bulb Vases, in glazed dark green, unglazed, neutral drab shade, $2\frac{1}{2}$ in dia., $\frac{1}{2}$; 4 in dia., $\frac{1}{3}$; $\frac{5}{2}$ in dia., $\frac{2}{7}$; 7 in dia., $\frac{3}{2}$ each.

Illustrated List of other Vases and Bowls for Bulb Culture sent on application.

Useful Tools for Bulb Planting, Etc.

Barr's Special Bulb Planter (Regd. 548091), specially designed for planting Daffodils and other bulbs in grass. This tool cuts and lifts a clean circular piece of turf which is released from the cup when the second hole is made, and lies ready at hand to fill in the holes when the bulbs have been

put in, it being only necessary to remove a little of the soil from the bottom of the sod. A time must be chosen for planting when the ground has become softened after carly autumn rains and not when in a hard and baked condition, as it is then impossible to use this or indeed any other tool with success. By the use of BARR's SPECIAL BULB PLANTER a large quantity of bulbs may

be planted in a very short time, and without the least disturbance of the sward. The length of the tool is 38 inches over all, weight about 3½ lbs. The cup is manufactured from high-class hardened steel and always carries a keen cutting edge.

Supplied in 3 sizes of cup: - To cut out a circular hole 2, 21, or 21 inches diameter, each 10/6. We shall send the medium size $(2\frac{1}{4})$ in.) if no instructions to the contrary are given.

Dibber Special Bulb Barr's 468878), specially designed for dibbling bulbs into borders, etc.; steel shod, with strong iron tread and cross wooden handle; a good strong heavy tool, weight about 63 lbs., length 36 inches over all. 9/6 each.

Bulb Trowel, made of best steel, Barr's Special specially designed for lifting and planting bulbs, etc. It will be found of great value for general garden purposes, and far in advance of the old-fashioned trowel. 2/9 each.

New Pattern Daffodil Hoe, a very useful tool for breaking the surface soil in the Flower Border during dry weather, and especially in early spring when Daffodils are just showing; also a useful weeding tool. With 3 ft. handle (41 inches over all, and weight under 1 lb.) 1/9 each, with short handle (12½ inches), 1/3 each.

Hybridising Tweezers, suitable for easily removing pollen from Daffodil flowers, per pair, 2s. 6d. A Full List of Garden Requisites sent on application.

Special Notices and Terms of Business. FREE CARRIAGE OF BULBS.

- All Orders for Bulbs to value £1 and upwards sent Carriage Paid to any Railway Station in the United Kingdom.
- Prepaid Orders for Bulbs to value 10s, and upwards sent Carriage Paid to any Railway Station in the United Kingdom.
